DRAWING AND MODELING IN AUTOCAD The basic building block of AutoCAD is a drawing, which is composed of various objects. The objects can be used to represent a drawing with its contents, can be saved to save the drawing for later use, or can be used to provide the structure for annotations, legends, and dimensions. All objects can be represented by points, lines, text, and blocks, and these representations can have their own properties. Blocks are dynamic in nature, and contain information about parameters, coordinates, or math functions. Objects can be grouped into layers, and each layer can be tagged to be stored separately. Layers can also be deleted, shared, or hidden. Layers provide a means for organization
