I've been using convert.exe to make an image from a batch file, but that requires a command-line option, and I'd like to know if there is a batch-file option, similar to how echo.exe has the -e switch, but that is just for the text on the screen. I need to put that image in a HTML document, and that document will be viewed with no text on the screen. Is that possible? A: The following batch file (on Windows) makes an image file from a text file. @ECHO OFF for /f %%a in ('findstr /b "^" /c:"foo" "c:\path\to\file.txt" ') do ECHO convert "c:\path\to\file.txt" -resize "100x100>" "c:\path\to\file.txt.jpg" You can change the text parameter to your needs (like : Hello World! etc.). The command will create a file "file.txt.jpg" with your parameter in the filename. And if you want to open the jpg image file with a browser (like chrome or firefox) just make a link to the file like or "file.txt.jpg" Hope this can help you :) Q: Is the set of all subsets of a set of cardinality at most $|X|$ always finite? Given a set X and a function $f: \mathcal{P}(X) \setminus$
