Essays of all types are considered. Novel carbazole-based fluorescent small molecule sensors for phospholipase D. Carbazole derivatives based on piperazine and aminopyrrole backbone have been synthesized for their application as fluorescent sensors for detection of phospholipase D. Upon the addition of phospholipase D, a single carbazole fluorescent probe undergoes concentration-dependent structural transition to form a cavity, resulting in the fluorescence quenching. The selectivity and sensitivity of the probe for phospholipase D are also investigated. The fluorescent probe is found to be highly selective for phospholipase D over other phospholipases and has a detection limit of 0.01 units/mL. Simplify $(\sqrt{76} + \sqrt{76})^2 + 0 - (0 + -2^*$
